The Report

This is the second report on patterns of behavioral health admissions within local emergency departments of North Carolina community hospitals in response to the General Statute 112C-147.1.1 Section 10.49(r). The report presents information for the second quarter of 2007-08, October to December, 2007.

The information presented has been collected through NC DETECT, a statewide epidemiological data collection system (see page 2 for detailed explanation of NC-DETECT). The document summarizes the utilization of community hospital emergency departments of the state by individuals with a behavioral health diagnosis (mental health and substance abuse). Consumers with developmental disabilities presenting at an emergency department during the quarter were fewer than 10 for almost all LMEs and this information has been suppressed for data confidentiality. The only exception to this is Wake LME where 11 developmental disability consumers were admitted to emergency departments during this quarter.

The information from NC DETECT is received by the Division of Mental Health, Developmental Disabilities and Substance Abuse Services through a data sharing agreement with the Division of Public Health. The data are provided to the Division of Mental Health as an aggregated file, providing the total number of admissions by disability status, age group and gender. The consumers that are represented in the report are those who had a behavioral health, ICD-9¹ code, indicating their diagnosis.

This report compares data where applicable to the previous two quarters of information. The data presented merely showcases the volume of individuals with a mental health or a substance abuse diagnosis seeking care from an emergency department of a community hospital. This report does not attempt to interpret or make conclusions on the data presented. The intent, explanation and potential limitation of each graph and chart, as applicable, is provided with the respective depiction. The Division encourages Local Management Entities to contact hospitals within their catchment area and build relationships at the local level to understand the data presented further and to develop mechanisms to address the issues related to access to services.

¹ The **International Statistical Classification of Diseases and Related Health Problems** (most commonly known by the abbreviation **ICD**) provides codes to classify [diseases](#) and a wide variety of signs, symptoms, abnormal findings, complaints, social circumstances and external causes of injury or disease. Every health condition can be assigned to a unique category and given a code, up to six characters long. Such categories can include a set of similar diseases.

2. Source of Information

The North Carolina Disease Event Tracking and Epidemiologic Collection Tool (NC DETECT), is the early event detection system of the North Carolina Public Health Information Network. NC DETECT was created by the North Carolina Division of Public Health (NC DPH) in 2004 to address the need for early event detection and timely public health surveillance in North Carolina using a variety of secondary data sources. These secondary sources include information from local emergency departments, the Carolinas Poison Center, the Pre-hospital Medical Information System (PreMIS), and the NCSU College of Veterinary Medicine Laboratories (<http://www.ncdetect.org/>).

NC DETECT is developed and maintained by staff at the Department of Emergency Medicine at the University of North Carolina at Chapel Hill with funding by the NC DPH. The information presented in this report is based on data received by the NC DETECT system from emergency departments of community hospitals.

3. Emergency Department Admissions

The data presented below (Figure 1) show the total percentage of consumers who were admitted to a local emergency department with a behavioral health (mental health and substance abuse only) diagnosis. The percentage is calculated as a function of the total admissions for all causes to emergency departments (963,643 admissions) during the second quarter of SFY 2007-08. The total number of admissions for consumers with a mental health diagnosis during the second quarter of SFY 2007-08 was 79,007. During the same quarter 25,165 consumers were seen in emergency departments for a substance abuse related issue. The percentage of consumers in quarter two of SFY 2007-08 shows very little change from the past two quarter's admissions of 8.5% and 8.8% respectively for mental health and 3.0 and 3.1 % for substance abuse for QTR 4, 2006-07 and QTR 1 2007-08.

Source: NC DETECT QTR 2, SFY 2007-08

Figure 2, below, shows the percentage of admissions within local emergency departments disaggregated by age group and disability status. Data shows a higher representation of adults with a behavioral health diagnosis seeking care from the emergency departments compared to children and adolescents. The information is consistent with the data from QTR4 2006-07 and QTR 1, 2007-08.

Source: NC DETECT QTR 2, SFY 2007-08

Note. For the second quarter of 2007-08 there were 0 child (age \leq 17 yrs) substance abuse admissions for the following LMEs: Albemarle, Beacon center, Burke-Catawba, Crossroads, Durham, Eastpointe, Five County, Foothills, Johnston, Onslow-Carteret and Southeastern Center

Figure 3 shows the distribution of males and females seeking mental health and substance abuse related care through local emergency departments. There were a higher number of females seeking care for mental health, whereas the percentage of men being admitted for substance abuse related issues were almost double that of women. This pattern of admissions is consistent with those seen in national emergency room admissions.

Figure 3. Mental Health and Substance Abuse Admissions in Local Emergency Departments by Gender, QTR 2, SFY 08

Source: NC DETECT QTR 2, SFY 2007-08

Table 1, shown below presents the counts and rates of admission for mental health and substance abuse related concerns during the second quarter of 2008. The rate allows for comparison of admissions across Local Management Entities (LME), which provides services to counties with varied population sizes. The statewide rate of admission per 10,000 population for mental health was 87.4 persons for the 2nd quarter, SFY 2008 and the statewide rate for substance abuse admissions was 27.8 persons. Consistent with the past two quarters of data, Western Highlands LME had one of the highest rates of mental health admissions (146.2 per 10,000) while Southeastern Regional (SER) had the highest rate of substance abuse related admission (36.9) for the quarter. Guilford had the lowest rate (55.5 per 10,000 population) for mental health admissions and Five County, and Foothills LMEs (22.3, 22.5 respectively per population) had the lowest rates for substance abuse admissions for the quarter.
